

Please fill in this form if you want us to help calculating the core thickness. It goes without saying that all this information is kept confidential.

Company/client name:

Ski name:

Ski length [mm]:

Sidecut

Tail width [mm]:

Waist width [mm]:

Nose width [mm]:

Actual core profile (give us xls file, or fill in table below, x=0 is the back end of the core)

x position [mm]	0	200	400	600	800	1000	1200	1400	1600	1800	2000
Thickness [mm]											

Exact core length:

Type of wood core used:

Type of bCores chosen:

D200

QX+

Laminates information

Lower laminate:

From base to core	Layer thickness [mm]	Layer E-modulus [MPa]
1 st layer		
2 nd layer		
3 rd layer		
4 th layer		

or

Fiber type	Weight at 0° [gsm]	Weight at +45° [gsm]	Weight at -45° [gsm]	Weight at 90° [gsm]	Weight other angle [gsm] Angle:

Upper laminate:

From core to top	Layer thickness [mm]	Layer E-modulus [MPa]
1 st layer		
2 nd layer		
3 rd layer		
4 th layer		

or

Fiber type	Weight at 0° [gsm]	Weight at +45° [gsm]	Weight at -45° [gsm]	Weight at 90° [gsm]	Weight other angle [gsm] Angle:

Optional information:

Base thickness [mm] :

Edges geometry [mm]

height:

width:

Topsheet thickness [mm]:
